

## **GRANIT ENDURANCE CARBIDE - RANGE OF HARD METAL TOOLS FOR THE AGRICULTURE SECTOR SIGNIFICANTLY EXPANDED**

Since 2020, replacement parts wholesaler GRANIT has been offering high-performance tillage products for the agriculture sector under its own GRANIT ENDURANCE CARBIDE brand. These hard metal tools are able to withstand the heaviest loads, offer long-term dimensional stability and ensure a consistently good working pattern. In addition to a continuous expansion of the tillage range, high-quality wearing parts for use in the forestry and construction sectors are now also included.

**Heeslingen, 12th June 2023** - Durable wearing parts such as milling chisels and interchangeable lugs for use in road construction and special heavy construction work are now available in the GRANIT webshop. GRANIT ENDURANCE CARBIDE products for construction machinery are developed and produced in Germany together with an experienced and well-respected mining and road construction specialist based in Baden-Württemberg.

### **Range for the agriculture and forestry sector also expanded**

The ENDURANCE CARBIDE range for agriculture and forestry comprises a total of almost 300 different products, and has been successively expanded since entering the market. GRANIT offers a significantly expanded range for sowing and tillage work, including parts for seed drills, cultivators, ploughs, rotary harrows and tillers. The forestry range has also been expanded to include an even larger selection of wearing parts for forestry mulchers, forestry tillers and stone crushers.

### **High-strength and low-wear tillage tools**

Only materials that are specially tailored to the requirements of the agriculture, forestry and construction industries are used for the GRANIT ENDURANCE CARBIDE tools. The solid boron steel body gives the tools long-term dimensional stability and ensures a fixed tool position over long periods of use. The use of high-strength tungsten carbide-cobalt plates ensures excellent wear resistance even under the most adverse conditions. By tempering after soldering, the tool retains its full hardness and is superior to many competition products.
